

BIOS 843
Seminar in Biostatistics
Instructor: invited lecturers

Credit hour: 1 credit

Spring and fall course meeting pattern: Thursday 3:30pm-4:30pm weekly

This course consists of attending the weekly faculty seminar series in the Department of Biostatistics. The goal of this seminar course is to expose students to current research topics in the field and to also give them exposure to seminar presentation. These seminars are of immense use to the students as they show them current active research areas as well as hot topics in the field. The seminars are useful to students when they pick a dissertation topic and they give students a broad exposure to several research areas in biostatistics. They serve a great educational purpose for research.

Students cannot miss more than two seminars to get credit for the course. There is no homework or exams for the course. Attendance is taken at all of the seminars. This seminar course is offered in both the Fall and Spring semesters in every academic year.
