A letter from the Dean of UNC School of Public Health

The UNC School of Public Health is distinguished by our commitment to engage with North Carolina, especially our state leaders and public health community, to solve public health challenges in the state. The North Carolina Institute for Public Health (NCIPH) is at the forefront of this commitment and serves as a vanguard in educating health professionals and in working with communities to deliver optimal public health services. The mission of the NCIPH is pursued through our continuing education programs and executive education programs, through consultation and evaluation services and by assisting communities to deal with emerging issues, such as pandemic flu. The NCIPH also works through partnerships with North Carolina's public health leaders and others, including the AHEC system, Kenan-Flagler Business School and the UNC School of Medicine to train the nation's public health leaders through innovative, tailored programs. As dean, I am especially proud of the Institute's can-do attitude and their willingness and devotion to create new models that work in the field.

Even beyond the state, the NCIPH has emerged as a leader on the national level, offering programs that have served as models in states through the southeast and the nation. Our continuing education courses are available both through traditional onsite and innovative, e-learning models.

I am proud of the strong public health community in North Carolina and proud of the NCIPH. This annual report shows why the NCIPH is an integral part of our School and helps make the UNC School of Public Health the number one ranked public School of Public Health in the US ranked by US News and World Report.

With best wishes,
Barbara K. Rimer, DrPH
Dean
UNC School of Public Health

Vision: Serving our State...Leading the Nation

The North Carolina Institute for Public Health will be a nationally and internationally recognized leader in public health education and consulting. The Institute will be a collaborative, intellectually vibrant community distinguished by its capacity to build partnerships, to cross institutional and disciplinary boundaries, and to bring state-of-the-art knowledge and practices to frontline practitioners, all in the pursuit of public health excellence.

Mission: The service and outreach arm of the School of Public Health

We bring the public health scholarship and practice communities together to prepare and empower practitioners and to inform and stimulate scholars for the common purpose of protecting against threats to public health and improving the public's health and well-being.

As Alexander Graham Bell said, "Great discoveries and achievements invariably involve the cooperation of many minds." At the Institute we are blessed with an energetic and entrepreneurial staff and professional association and friendships with committed public health practitioners.

At the heart of our success at the Institute is partnership, and I'd like to begin our review of last year's highlights and accomplishments by thanking our partners in the practice of public health.

First, the Institute enjoys an extensive relationship with the North Carolina Division of Public Health. Dr. Leah Devlin, our state health director, and her management team are leaders in public health in the nation, and in collaboration with the Institute and others have initiated several "finger on the pulse" public health programs. We are proud of our affiliation with the North Carolina Association of Local Health Directors. This is an energetic association with its hand on the pulse of public health in North Carolina. Finally, the Institute enjoys close ties with individual health directors and their staffs throughout the state. It is our privilege to provide them with training, consultation, and evaluation services as they promote public health in their respective communities.

Through partnerships with our friends and colleagues in North Carolina, with foundations and federal agencies, and, of course, with the School's faculty and staff, the Institute has accomplished a great deal and has experienced remarkable growth by nearly 20 percent last year.

Our challenge today is to manage our growth effectively, to continue to focus on our core priorities, to continue to more effectively connect Institute activities with those of the School's academic departments, and to remain a nimble and energetic organization that can quickly identify and respond to the needs of our public health community, and ultimately affect the public's health. Once again, I'd like to thank our partners in public health, and I look forward to many more years of productive collaboration.

Sincerely,
Edward L. Baker Jr., MD, MPH
Director, North Carolina Institute for Public Health
Research Professor, Health Policy and Administration
School of Public Health

July, 2005

- Management Academy for Public Health expands to six states
- 100th graduate of Certificate in Core Public Health Concepts feted
- Certificate in Field Epidemiology launched with 90 students

September

- Institute coordinates School of Public Health response to Hurricane Katrina
- Bill Browder, director, OCE, is acknowledged with Chancellor's Award and Order of the Long Leaf Pine
- Recurring legislative funds awarded for public health incubators

October

- Food Systems Leadership Institute, two-year Kellogg and National Association of State Universities and Land Grant Colleges program, launched
- Former continuing education specialist Barbara Chavious is acknowledged with the NC Public Health Association's Rankin Award
- The NCIPH launches a new leadership institute with the American College of Obstetricians and Gynecologists
- NC selected as one of five states in a Multistate Accreditation Learning Collaborative funded by the Robert Wood Johnson Foundation, the Institute, NC DPH and NCALHD are partners in this effort
- Judy Beaver, business manager, recognized by the University Employee Forum with its campus-wide Back Office Award
- NC OSHERC offers first online course on industrial hygiene
- NC OSHERC offers first Occupational Health Nursing/Safety Management Certification Review Course

November/December

- Record 21 abstracts accepted from NCIPH for presentation at the annual American Public Health Association conference
- Southeast Public Health Leadership Institute inducts 45 public health leaders into ninth class; scholars attend from Arkansas
- NCIPH launches nine-month customized leadership program for Novant Health
- NCIPH staff co-author article describing PREVENT training program in American Journal of Preventive Medicine

January, 2006

- Management Academy conducts first off-site sessions in Florida

February

- Evaluation Services assists State Division of Public Health with Katrina follow-up evaluation in Mississippi

March

- Article on accreditation process in NC appears in The Nation's Health
- Southeast Public Health Training Center organizes multi-state conference on methamphetamine abuse in Appalachia
- Public Health Grand Rounds broadcasts lessons learned from Katrina
- Team Epi-Aid spends Spring Break helping Gulf Coast hurricane recovery effort

April

- NCIPH finishes work on special issue of the Journal of Public Health Management and Practice devoted to outcomes from the Management Academy, including six implementation case studies from alumni teams (published Sept/Oct 2006)

May

- John Graham, deputy director, wins Robert E. Bryan Public Service Award at UNC, recognizing his work with the public health incubator collaboratives
- Management Academy graduates 88 to close out seventh year, bringing total alums to over 800
- Incubators Program initiates student intern program engaging students from UNC-CH, WCU, and ASU for regional projects

June

- Emerging Leaders in Public Health program graduates second class, bringing total alums to 86
- Incubator Initiative assists member Partnerships to secure over \$3 million to address CVD, diabetes, teen smoking, and HIV
- CE ends year with six major nursing courses and 13 environmental health training programs
- Sloan Foundation funds public/private emerging law initiative

The UNC School of Public Health has included continuing professional education as part of its mission since its founding over 50 years ago. The Office of Continuing Education is the largest continuing education department of any school of public health.

The Office of Continuing Education (OCE) designs and delivers nondegree professional education and training programs focused on improving the performance of public health professionals, many of whom require continuing education for licensing and certification.

Last year over 13,000 public health professionals received continuing education training in 283 courses offered by the Institute.

Many programs, workshops, and conferences are developed by practitioner-based committees who engage with the Institute for program planning activities, curriculum and content development, and program evaluation.

Work has begun on the North Carolina Public Health Academy, a three-year project funded by the Duke Endowment. OCE will work with Area Health Education Centers (AHECs) to provide conveniently accessible professional training opportunities customized to local public health educational needs, in essence, taking the University to the field.

The HRSA-funded Southeast Public Health Training Center (SPHTC) works very closely with OCE to develop, deliver and disseminate competency-based public health training in North Carolina and other southeastern states. The SPHTC focuses specifically on public health nursing and rural public health workforce development. The SPHTC maintains a large database, *Askphere.org*, of public health trainings and resources for trainers that can be used in competency-based training development.

Similarly, the North Carolina Occupational Safety and Health Education and Research Center (OSHERC) provided over 100 courses last year for specialists who ensure workplace safety and health. NC OSHERC provides education targeted for eight southeastern states but includes participants from all states and foreign countries as well.

“Global threats, accreditation requirements, and an aging workforce are but a few of the ongoing challenges for workforce development. Practitioner training that is on target, timely and delivered close to the workplace is critical to support the health of all North Carolinians.”

Steve Hicks, Director, Workforce Development

This year the Institute’s flagship leadership and management programs—the National Public Health Leadership Institute, Southeast Public Health Leadership Institute and Management Academy for Public Health—have graduated over 1300 public health managers and leaders combined. These programs bring together distinguished faculty from the UNC School of Public Health and partners such as the Kenan-Flagler Business School and the Center for Creative Leadership to help public health practitioners serve their communities and organizations more effectively.

The Emerging Leaders in Public Health program, in partnership with the Kenan-Flagler Business School and with help from the W.K. Kellogg Foundation, celebrated its second year. Under the topic “Managing in Turbulent Times,” the program has thus far helped develop 86 individuals working with underserved Latino, African-American and Native American communities to take on expanded leadership roles in the next decade.

The Certificate in Core Public Health Concepts program is one of the first of its kind, enabling working public health professionals to earn online credit toward a public health degree. Our enrollment success—340

New executive education programs were established last year including an epidemiology certificate, customized programs for Novant and the American College of Obstetricians and Gynecologists, and Emerging Leaders in Public Health to serve minority public health leaders.

professionals are in the on-line program today—has led to the introduction this year of a second on-line certificate program, in Field Epidemiology (120 are currently enrolled). Two additional programs are being proposed, including an on-line Global Health certificate.

This year the Office of Executive Education has increasingly used its extensive experience at curriculum design and track record of organizational impact to develop custom programs for specific groups.

“The Emerging Leaders program has successfully recognized that future public health leaders need a variety of high-level skills that cut across many diverse areas.”

Mekeisha Williams, Director, Emerging Leaders in Public Health Management Academy for Public Health

In the past year, the NCIPH Office of Consulting and Technical Assistance directed over thirty projects, including several community public health assessments. One such assessment was undertaken for Wilkes County in partnership with the Wilkes Community Health Council (WCHC) and the Healthy Carolinians affiliate in Wilkes County. WCHC spearheaded a community effort among public health officials, agency leaders and concerned citizens to streamline, improve and enhance the delivery of services to senior citizens throughout Wilkes County. Institute staff, with assistance from UNC School of Public Health graduate students, supported the project, identifying the county's providers of senior services, conducting telephone interviews to assess service needs, and investigating best practices in infrastructure for effective delivery of senior services. Based on this research, NCIPH made recommendations to the coalition to improve planning and delivery of senior services in Wilkes County.

The Institute has played a central role in the legislatively-supported public health incubator collaboratives program. It has consulted extensively with the six incubator partnerships comprising 79 participating counties.

The Institute has assisted North Carolina's innovative public health incubator collaboratives in securing over \$3,000,000 in grants and contracts to address local public health priorities.

These Partnerships have combined resources to address common health priorities. This year a diabetes media blitz, a campaign to reduce teen smoking, and a mobile HIV-counseling van were just a few of the over twenty innovative projects "hatched" by the incubators.

Evaluating programs, plans, and results is an important component in aiding organizational development. The Institute's evaluation team is proud of its work with the Institute's primary partners, the North Carolina Division of Public Health and the North Carolina Association of Local Health Directors, on the pilots of the North

Carolina Local Health Department Accreditation program. Evaluations among the pilot health departments undergoing accreditation were critical to the success of the process and helped garner support for the program.

Institute evaluators have also been part of the nationally-recognized studies focused on preparedness capacity and response to hurricanes, with applications for other public health emergencies. This year they completed work with the Mississippi Department of Health, responders to Hurricane Katrina.

"We found the individuals and work that the Institute provided to be informed, resourceful, timely and effective to support local projects."

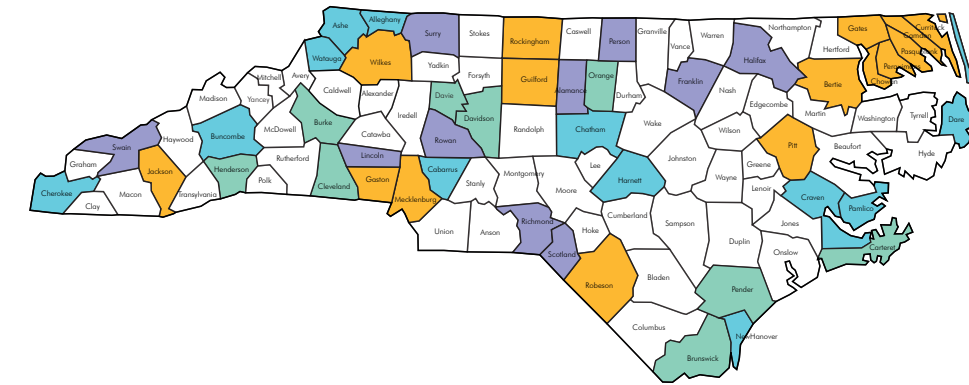

Beth Lovette, Health Director,
Wilkes County Health Department

The Institute has also served as the administrator for the state's local health department accreditation program. With the Division of Public Health, the Institute has provided assistance to twenty local health departments which have become accredited. This work has been recognized by the Robert Wood Johnson Foundation. North Carolina has been chosen as one of five states to participate in a nationwide accreditation learning collaborative.

The focus of local health department accreditation is on the capacity of the local health department to perform at a prescribed, basic level of quality the three core functions of assessment, assurance, and policy development and the ten essential services as detailed by the National Public Health Performance Standards Program. The program focuses on a set of minimal standards that must be met to ensure the protection of the health of the public.

Serving as Accreditation administrator, NCIPH coordinated 10 site visits to local health departments around the state this past year as part of this process.

North Carolina was chosen as one of five states to participate in a nationwide accreditation learning collaborative, supported by the Robert Wood Johnson Foundation and in partnership with the NC Division of Public Health. The Nation's Health, the main publication for public health professionals, in its March issue, recognized the Institute's role as administrator of the accreditation process for local health departments.

Accredited Counties in NC

- Accredited Health Departments
- 2006 Participating Health Departments*
- 2007 Participating Health Departments
- 2008 Participating Health Departments

*All of 2006 participating health departments are accredited

The North Carolina Center for Public Health Preparedness (NCCPHP) is a member of a national network of 27 Centers for Public Health Preparedness funded by the U.S. Centers for Disease Control and Prevention (CDC) to improve the capacity of the public health workforce to prepare for and respond to terrorism and other emerging public health threats.

In 2006, the Center was awarded funding from the CDC International Emerging Infections Program to develop curriculum for avian influenza rapid response teams in Southeast Asia. More than 130 participants from 14 countries received hands-on training.

NCCPHP provides a wide array of training and technical assistance in public health preparedness and applied epidemiology. The Center manages major projects, including the Training Web Site (a database of training modules) that has over 12,400 users from 146 countries, the North Carolina Workforce Development System (a learning management system related to assessment and training for North Carolina public health professionals), the publication of Focus on Field Epidemiology, and the Field Epidemiology Certificate program.

In 2006, the Center also managed contract projects with the NC Division of Public Health, the West Virginia Department of Health and Human Services, the CDC, the National Association of County and City Health Officials (NACCHO), and the Council of State and Territorial Epidemiologists (CSTE), as well as grants from the Association of Schools of Public Health (ASPH) and the Robert Wood Johnson Foundation.

Also in 2006, NCCPHP expanded its work around avian and pandemic influenza preparedness. NCCPHP began working in partnership with the North Carolina Division of Public Health to provide local health departments with technical assistance around pandemic influenza response plan development.

Pia MacDonald, Director,
North Carolina Center for Public Health Preparedness
Research Assistant Professor, Department of Epidemiology
UNC School of Public Health

“Keeping public health practitioners trained in public health preparedness is a constantly evolving process in that there are always newly emerging and reemerging diseases, natural disasters, and the threat of bioterrorism. Our Center provides training to a wide audience in North Carolina and around the world.”

Active Living by Design (ALbD) was launched in late 2001 as a national program of the Robert Wood Johnson Foundation (RWJF). ALbD helps partnerships across the nation increase routine physical activity and healthy eating through changes in community design.

Midway through this initiative, ALbD’s 25 diverse community partnerships have made excellent progress. To date, the ALbD community partnerships have implemented myriad initiatives, including:

- Amended development ordinances and established new street design standards
- Created parks, trails, greenways, and community gardens
- Implemented social marketing campaigns to increase awareness of opportunities for physical activity and healthy eating
- Changed school policies regarding recess and lunch menus
- Launched new programs promoting safe routes to school, bicycle recycling and distribution, and prescriptions for physical activity.

During their first two and a half years of funding, the ALbD community partnerships secured or leveraged an additional \$125 million to support active living initiatives in their communities.

In the past year, ALbD began working with several other organizations to test and replicate its comprehensive approach to community change. One example of this effort is in Minnesota, funded by Blue Cross and Blue Shield, where ALbD is working with a number of counties and municipalities to build local involvement and support for active living into communities. ALbD also provides technical assistance to two active living initiatives in North Carolina.

Sarah Strunk, Director,
Active Living by Design

“ With small amounts of seed funding as well as technical assistance, the ALbD community partnerships are making healthier places to live, work and play within reach of more Americans.”

As the service and outreach arm of the UNC School of Public Health, the Institute relies heavily on rich and sustained partnerships to carry out its mission. While the Institute provides a range of services to our partners, it does so as part of a reciprocal exchange of information, in-kind contributions, guidance, and funding. It is this ongoing exchange that has enabled the Institute to provide sustaining services that truly make a difference.

As the Institute director has noted, the Institute is especially grateful for its partnerships with North Carolina’s public health practitioners. In addition, the Institute has enduring relationships with a number of agencies and foundations which have a commitment to furthering the state and nation’s public health.

The following page has a partial listing of partners and the Institute programs that they provide with guidance and support.

“We have enjoyed our partnerships with the Institute, which have included many challenging and innovative projects. These ultimately will benefit the health of North Carolinians.”

Leah Devlin,
North Carolina State Health Director

Office of Continuing Education, NC OSHERC, and NC Center for Public Health Preparedness

NCIPH Office of Consultation and Technical Assistance Current and Projected Projects July 1, 2005 through June 30, 2006

Northeastern NC Partnership for Public Health (Ongoing)

- Serve as NCIPH representative on Board and Executive Committee
- Produced a County Profile Notebook for each county (completed)
- Facilitate training as requested
- Developed environmental assessment protocol and explored funding support for activity (completed)
- Conduct 501(c)(3) conversion feasibility study (in process)
- Explore funding opportunities in support of Partnership priorities (ongoing)
- Review/edit grant proposals (ongoing)

Northwest NC Partnership for Public Health (NW Incubator) (Ongoing)

- Develop standardized community health assessment survey, report and promotional brochure templates for partner counties; conduct assessments; evaluate CHA process and deliverables (CHAs and brochure completed for Wilkes and Davidson Counties; Surry County CHA in process)

South Central Partnership for Public Health (SC Incubator) (Ongoing)

- Research and compile grant funding opportunities in priority areas of Partnership interest (ongoing)

Central Incubator (Ongoing)

- Conducted “flash assessment” (completed)
- Conduct focus groups and a survey in support of regional public health workforce study (in process)

Division of Environmental Health - Lead Prevention (Completed)

- Conducted research on social marketing for lead poisoning prevention in a Latino community

Randolph Health Improvement Partnership (Completed)

- Conducted Comprehensive Community Health Assessment
- Conducted needs prioritization exercise
- Identified best practices for developing a provider network for serving the medically indigent

Randolph Hospital Healthy Weight Project (Completed)

- Consulted on research protocols
- Supervised student conducting best practices research
- Conducted focus groups among parents and service providers
