

BIOSTATISTICS SEMINAR

Bradley Saul,
DrPH
Lead Statistician,
NoviSci

Functional programming for high functioning statisticians

In this talk, I look at advantages of a functional approach to programming for statistics and data science. Through the lens of practical examples from a data science start-up, I explain monoids, monads, and why "lens" is a functional programmer's pun.

At NoviSci in Durham, Dr. Saul leads the statistics team and oversees the development of research software.

Thursday September 17, 2020 New time: 3:00 pm - 4:00 pm

Zoom meeting: Please also find a link in the email invite, with the password.
