

BIOSTATISTICS SEMINAR

**Richard C. Zink,
PhD**

Vice President of Data
Management,
Biostatistics, and
Statistical Programming
at Lexitas Pharma
Services, Inc.

It is Never too Early to Think About Statistical Leadership

The continued development and broadening of statistical influence is important for career growth and the statistics discipline. (Bio)statisticians and data scientists need to develop and actively nurture effective leadership skills. These skills are of particular importance in the multi-disciplinary environment in which we often find ourselves employed. In these situations, (bio)statisticians and data scientists often must communicate technical concepts clearly and convincingly to an audience with little-to-no statistical background. Ultimately, the success of a (bio)statistician's or data scientist's collaborations with non-statisticians determines how readily he or she can contribute to important decisions in their daily work. It is important to start early! Even as a student, it is never too early to think about statistical leadership.

Thursday February 25, 2021

3:30 pm - 4:30 pm

Zoom meeting: Please also find a link in the email invite, with the password.
