Research Triangle Institute

DNA Repository for the NIAAA National Epidemiologic Survey on Alcohol and Related Conditions-III (NESARC-III)

The purpose of the project is to continue and expand the data and biospecimen collection of patients with genetically triggered TAAs. The ultimate goal is to reduce cardiovascular complications, which represent the primary cause of morbidity and premature death in persons with genetically triggered thoracic aortic aneurysms.

Biospecimen Processing Facility Recharge Center

The major objective of the UNC BSP is to support and enhance translational, clinical, population, and basic science research at UNC and beyond. This goal is achieved by providing the research community with a centralized, quality controlled and quality assured facility for the processing, storage and disbursement of human biospecimens.

Clinical Genomics

The UCRF's mission is to ensure that future gene ratios of North Carolinians will develop cancer less often and live longer and better when they do. Research creates new knowledge, turns that knowledge into innovative treatment, screening, and prevention, and then assures delivery of innovations across the state – that research is the key unlocking the doors to a new and better future. The UCRF is helping make that research possible.
