Title: Rapid Response to Incident HIV Infection through Social Network Strategies and Molecular Epidemiology to Inform Partner Services

Major Goals: This project seeks to improve the response to incident HIV infection by engaging the networks of Black men who have sex with men (BMSM) and transgender women (TGW) through a combination of partner services, social network recruitment, and HIV genetic cluster detection. We will employ regional genetic and contact network analysis of incident and prevalent HIV in North and South Carolina to evaluate important connections (bridging) between states and between urban and rural areas. The study also will use mixed methods to examine the barriers and facilitators of engaging BMSM/TGW members of networks with recent HIV transmission as well as develop and evaluate an enhanced social network strategy for effectiveness and implementation outcomes.

Assessing the HIV care cascade in a large southern prison system

In a large southern prison system, we will examine HIV-positive prisoners' engagement in healthcare and identify barriers to entering and maintaining care and achieving viral suppression. By understanding inmates' use of HIV care in prison, we may strengthen efforts to improve their health and reduce their risk for transmission during incarceration and after release.

This project will use community-based participatory research techniques to engage a broad range of community stakeholders in the design and implementation of study methods; Assess perceived community resources, needs, priorities, and mutable obstacles to implementation of HIV prevention programs, particularly RAPP, among DHA residents and DHA and CAARE program staff; create and test for feasibility, acceptability and preliminary efficacy, a program plan for implementation of RAPP among DHA housing residents that can be applied to implement HIV prevention programs in other small urban regions in the US South. If successful, our next step will be to test our approach more widely at multiple southern US sites in an Ro1 application.
