

**Department of Maternal and Child Health  
School of Public Health  
The University of North Carolina at Chapel Hill**

**MHCH 702  
*Foundations of MCH*  
Spring 2018**

**When:** Tuesday and Thursday, 8:00 AM – 09:45 AM  
(Class begins at 8:00 AM, Group work 9:15-9:45 unless noted)

**Where:** Lectures: McGavran-Greenberg 2306

**Faculty:** **Tamar Ringel-Kulka, MD, MPH**  
404A Rosenau Hall  
919-843-1054  
[ringelta@email.unc.edu](mailto:ringelta@email.unc.edu)

**Teaching Assistant:**  
**Hannah Silverstein**  
[silver24@live.unc.edu](mailto:silver24@live.unc.edu)

**Credits:** 4 credit hours

**Prerequisites:** None. This is a core course required for MCH majors. Others require permission of instructor to enroll.

**Format:** Lectures, discussion, case study, and small groups

Maternal and Child Health (MCH) is the professional and academic field that focuses on the determinants, mechanisms and systems that promote and maintain the health, safety, well-being, and appropriate development of children and their families in communities and societies, in order to enhance the future health and welfare of society and subsequent generations.<sup>1</sup>

The purpose of this course is to develop critical thinking about the determinants of well-being of the MCH population. According to Kurfiss,<sup>2</sup> critical thinking is “a rational response to questions that cannot be answered definitively and for which all the relevant information may not be available. It is defined here as an investigation whose purpose is to explore a situation, phenomenon, question, or problem to arrive at a hypothesis or conclusion about it that integrates all available information and that therefore can be convincingly justified. In critical thinking, all assumptions are open to question, divergent views are aggressively sought, and the inquiry is not biased in favor of a particular outcome.”

---

<sup>1</sup> Alexander GR. Maternal and Child Health (MCH). *Encyclopedia of Health Care Management*. Thousand Oaks, CA: Sage Publications; 2004.

<sup>2</sup> Kurfiss, J.G. 1988. Critical thinking: Theory, research, practice, and possibilities. Washington, DC: Association for the Study of Higher Education.

**Major themes:** This course is organized upon several major themes, which reflect the following important principles from the field of MCH:

**Population-based.** Public health practice focuses on the health of aggregates or groups. The population base for MCH includes all women, infants, children, adolescents and their families, including fathers and children with special health care needs, both domestically and globally.

**Levels of prevention.** The classic definitions used in public health distinguish among primary prevention, secondary prevention, and tertiary prevention. Primary prevention is the prevention of a disease or condition before it occurs; secondary prevention is the prevention of the onset, recurrence or exacerbation of a disease or condition that already has been diagnosed or for which a population is at risk; and tertiary prevention is the reduction in the amount of disability caused by a disease or condition to achieve the highest level of function. While focusing on primary prevention, public health and maternal and child health practice are necessarily attentive to the tradeoffs among the different levels of prevention.

**Disparities.** The Health Resources and Services Administration defines health disparities as population-specific differences in the presence of disease, health outcomes, or access to health care. Within the context of this course, the primary focus will be on disparities among groups defined by race/ethnicity, age, gender, socioeconomic status, nationality, and geographic location.

**Life course perspective.** In addition to the analysis of the relationship between concurrent exposure and health outcomes, a growing body of research highlights both the longitudinal and cumulative effects of these exposures. According to Michael Lu, Associate Administrator in charge of the Maternal and Child Health Bureau, the life course perspective is the, “conceptual framework...that recognizes that each stage of life is influenced by all the life stages that preceded it, and it in turn influences all the life stages that follow it.” Fundamental research and policy questions flow from this perspective.

**Family-centered.** Family-centered care assures the health and well-being of children and their families through a respectful family-professional partnership. It honors the strengths, cultures, traditions and expertise that everyone brings to this relationship. Family-centered care is the standard of practice which results in high quality services. Collaboration among patients, family members and providers occurs in policy and program development and professional education, as well as in the delivery of care.

**Interdisciplinary.** Interdisciplinary approaches integrate the analytical strengths of two or more scientific disciplines to address a given problem. Engaging a range of disciplines in collaboration broadens the scope of investigation into complex public health problems and yields fresh and possibly unexpected insights.

**Competencies:**<sup>3</sup> This course addresses the interactions among economic, social, cultural, educational and health services factors that influence the health of populations of women, children and families, with attention both to the U.S. and other global settings. In recognizing the immense number of particular topics that any core MCH course could address, the developers of this course have selected topics that utilize the strengths of our faculty to address the following competencies in the context of a global perspective.

At the conclusion of this course, students should be proficient in:

1. Describing determinants of health and illness including biological, behavioral, socio-economic, demographic, cultural and health care systems influences;
2. Analyzing the foundations of scientific inquiry including, but not limited to, epidemiology and the uses and limitations of conceptual frameworks;
3. Appraising the purpose, rationale, activities, and performance measures for existing major MCH programs in the U.S. and other countries;
4. Illustrating the historical development of MCH public policies and practices, including relevant legislation, in the U.S. and other countries;
5. Explaining the organization and financing of health services in the U.S. and other countries and the position of MCH within the system;
6. Identifying the philosophy, values, and social justice concepts associated with family-centered, comprehensive, community-based, and culturally competent MCH and public health programs and services, including recognition of community assets; and
7. Combining and applying public health principles and techniques across disciplines to solve multifaceted problems within the context of family centered, comprehensive, culturally competent, community-based MCH programs and systems.

**Requirements:** Teaching and learning are interrelated. Both instructors and students are expected to be active participants in this course. The faculty responsibility has been to develop a core MCH course that addresses significant topics and concepts in the field and to prepare individual sessions, exercises and assignments that will facilitate student learning. Please realize that not all significant topics and concepts can be addressed by a two-semester core course. Topics and speakers have been chosen thoughtfully in order to give initial exposure to foundational concepts. The student's responsibility as a learner is to engage with the course ideas, to come to class prepared to participate in class discussions, recitations and exercises, and to learn to think critically as she or he listens, writes and discusses.

**Attendance.** The Graduate School and the Department of Maternal and Child Health expect students to attend class on time and to stay until the end. To the extent possible, please inform the instructor if you know ahead of time that you will be absent or late for a class.

**Class discussion leader.** Over the course of the semester, many students will have the opportunity to introduce a class session. In this role, the student will be responsible for developing one concise discussion question based on that lecture's readings, posting it to Sakai by midnight the day before, then facilitating a 10 minute class discussion at the

---

<sup>3</sup> Based on ATMCH competencies

beginning of the class session. More information regarding this assignment will be made available on the Sakai site.

**Required readings.** Readings will be made available through Sakai. Recommended readings will be suggested from time to time for students who wish to pursue selected topics in depth. Students are encouraged to share other helpful resources with the class.

**Written assignments.** There will be three papers this semester, providing an opportunity to address a question by integrating lecture and readings. Papers may be up to 1,000 words, double-spaced, left (as opposed to fully) justified, and with 1” margins on all four sides. The font must be Times Roman, and the font size must be 12.

Papers are due at **4:30pm** on the following dates. Papers must be submitted as a Word attachment to an email sent to Dr. Ringel-Kulka. Papers submitted late will lose points.

**February 2**

**March 2**

**April 13**

Please utilize the AMA Manual of Style when formatting references. Exact formats and citation styles for written assignments are based on What AJPH Authors Should Know from the *American Journal of Public Health*. BibWord (<http://bibword.codeplex.com/>) may be of assistance. I strongly encourage the adoption of an electronic citation system such as RefWorks, Mendeley, EndNote or others. Papers that use the incorrect formatting style will be returned without a grade.

**Evidence in written assignments.** The evidence base for these assignments consists of peer-reviewed articles, official reports by governmental agencies such as the DHHS, MCHB, CDC, etc., and official reports by international organizations such as the WHO and UNICEF. Statistics and facts that appear in lay publications, even respected ones such as the New York Times, Wall Street Journal or their international equivalents, should be traced to their original sources and cited accordingly.

### **CASE STUDY GROUPS**

**Purpose:** Case-study groups are designed to foster opportunities to explore in depth a topic of interest, learn among a group of peers, and practice cooperation, negotiation, and delegation with peers.

**Logistics:** Groups will be organized by the instructor and will meet in person and/or online.

**Product:** This semester each group will work on developing their own case study. Students will receive a group grade for the final product. Groups will be supported by faculty and the TA as needed. **The case study is due by 4:30pm on March 9. Groups will be asked to implement their case study through an in-class exercise on April 5, 17, and 24.** The written case study is worth 70 points of your total grade for the case study and the class presentation/implementation portion is worth 30 points.

**Grading:** The instructor will use the point grading system, H  $\geq$  95, P+ = 90-94, P = 75-89, L = 65-74, and F = < 65. Please note that the university registrar only accepts grades of H/P/L/F, so the P+ is solely for your information, but will not be reflected in official grades. Final grades will be calculated using the following proportions:

- Each of the three written assignments, 20 percent.
- Class participation and class engagement, 15 percent
- Case study, 25 percent

**Course Evaluation:** There will be two evaluation methods. One is the University's online course evaluation that all students are expected to complete during the two week window of time at the end of the course as listed on the UNC-CH Academic Calendar. The second is an evaluation on each individual class section sent by the TA.

**Student Honor Code:** The UNC honor code (<https://studentconduct.unc.edu/honor-system>) will be in effect in this class with respect to individual assignments. In the case of group assignments (i.e., case studies), students are encouraged to work together. If you have questions about appropriate behavior regarding the honor code, check with the instructor.

**Important Note on Special Accommodations:** If you need any special accommodation for an assignment or other course activity, you must be registered with UNC Accessibility Resources and Services (<http://accessibility.unc.edu/>), who will then provide me with an official letter.

**Global Health Resources:** The HSL public health resource librarian has assembled the following links for those who may be interested in global health:

- The Global Health guide <http://guides.lib.unc.edu/globalhealthtoolkit> offers quick and easy access to websites, journal articles, electronic books and other research materials on a wide range of global health topics.
- Global Health Data [http://guides.lib.unc.edu/global\\_health\\_data](http://guides.lib.unc.edu/global_health_data) helps you find data and statistics fast. They have compiled a list of reputable sources to help you add evidence to your global research.
- Global Health Internships and Service Opportunities <http://guides.lib.unc.edu/GlobalOpportunities> pulls together campus resources, directories of internships and specific programs for a full menu of global experiences.
- If you have additions or comments for these pages, please email [hslglobal@unc.edu](mailto:hslglobal@unc.edu).

2. Describe the relative distribution in the occurrence of maternal and newborn deaths between developed and developing countries.
3. Describe the key components of emergency obstetric care.
4. Describe major challenges in providing high quality emergency obstetric care in low resource settings and approaches for addressing these challenges.

January 30, 2018 (T)

Newborn Screening

Shanahan

1. Review the history of newborn screening
2. Discuss current newborn screening programs and practices, including expanded newborn screening
3. Examine the ethical, legal, and social implications of expanding newborn screening

February 1, 2018 (TH)

Community Based  
Participatory Research  
(CBPR) in MCH

Palmquist

1. Understand the principles of CBPR
2. Explain the process of developing CPBR to address MCH issues
3. Assess contexts for which the use of CBPR is an appropriate research methodology
4. Describe the challenges and potentials for using CBPR

February 2, 2018 (F)

*Paper 1 Due*

February 6, 2018 (T)

Vaccines

David Weber

1. To understand basic vaccinology
2. To understand how the CDC and ACIP develop vaccine policy
3. To understand the currently recommended vaccines for children, adolescents and pregnant women

February 8, 2018 (TH)

Children with Special  
Health Care and Title V

Margolis/Matson

1. Examine the definition of children and youth with special health care needs and consider the implications for services
2. Analyze the role of Title V in North Carolina for selected CYSHCN priorities
3. Appreciate the growing importance of family-professional partnership in services for CYSHCN

February 13, 2018 (T)

Adolescent Health

Murray

1. Understand the health challenges faced by adolescents globally.
2. Discuss considerations for interventions under development.

3. Using adolescents with HIV as example, understand the age-specific challenges pertaining to this age group

February 15, 2018 (TH)

Adolescent Sexuality

Halpern

1. Analyze the context and challenges of research on adolescence and adolescent sexuality
2. Analyze contributors to sexual behavior patterns
3. Appraise trends in adolescent pregnancy and childbearing in the United States, and compare across countries

February 20, 2018 (T)

Class Discussion 1

Ringel-Kulka/Silverstein

## **MODULE 2: SPECIAL TOPICS IN MCH**

February 22, 2018 (TH)

Under and Malnutrition  
in Children

Flax

1. To describe the extent of the problem of child undernutrition globally
2. To discuss the causes and consequences of child undernutrition
3. To review examples of interventions for reducing child undernutrition

February 27, 2018 (T)

Orphans and Vulnerable  
Children

Gray

1. Understand the basic epidemiology (prevalence and incidence) of trauma among orphaned children in low- and middle-income countries (LMIC)
2. Understand complexities of orphan well-being in different care settings in LMIC
3. Discuss the role of global health policy in orphan care

March 1, 2018 (TH)

Advocacy of MCH

Sotak

1. Provide students with an overview of state government bodies and procedures in order to lay the groundwork for successful advocacy efforts.
2. Share general principles of community organizing, lobbying / advocacy, and coalition building that can ultimately lead to policy change and improved health outcomes for children and families.  
Discuss the current national and state context for children's health policy and what that means for advocates.

March 2, 2018 (F)

*Paper 2 Due*

March 6, 2018 (T)

Childhood Obesity

Wasser

1. Define obesity and assessment of growth among children.
2. Provide an overview of global trends in obesity.

3. Review risk factors for childhood obesity.
4. Appraise the effectiveness of interventions to prevent obesity among children and adolescents.

March 8, 2018 (TH)	LGBTQ Health	Lee
	<ol style="list-style-type: none"><li>1. Define sexual orientation and gender identity</li><li>2. Analyze causes of LGBT disparities at multiple levels (e.g., family, healthcare, school, neighborhood, media)</li><li>3. Formulate intervention points at multiple levels (e.g., family, healthcare, school, neighborhood, media) to promote LGBT health</li><li>4. Appraise the role of public health advocacy and policy change in reducing LGBT health disparities</li></ol>	

March 9, 2018 (F) *Case Study Due*  
*March 10-18: Spring Break*

### **MODULE 3: INJURY AND VIOLENCE**

March 20 (T)	Global Violence Against Women	Bloom/Casebolt
	<ol style="list-style-type: none"><li>1. Understand historical context and definitions of GBV</li><li>2. Describe the types of GBV &amp; its intersection with RH</li><li>3. Discuss IPV patterns &amp; risk factors</li></ol>	
March 22, 2018 (TH)	Introduction to Injury	Kotch/Ringel-Kulka/Silverstein
	<ol style="list-style-type: none"><li>1. Understand the fundamental concepts of injury prevention</li><li>2. Apply the Haddon Matrix framework to an example of a specific injury</li><li>3. Use the Haddon Matrix to identify potential interventions to reduce the probability and the consequences of injury.</li></ol>	
March 27 2018 (T)	Unintentional Injury	Austin
	<ol style="list-style-type: none"><li>1. Describe the epidemiology of unintentional injury in the U.S. and globally</li><li>2. Apply concepts for evaluation of scientific evidence to an unintentional injury article</li></ol>	
March 29, 2018 (TH)	Child Maltreatment	Shanahan
	<ol style="list-style-type: none"><li>1. Define child maltreatment, including specific forms of abuse and neglect</li><li>2. Describe the prevalence of child maltreatment, as well as risk and protective factors associated with it</li></ol>	

3. Describe the impact of child maltreatment
4. Discuss strategies to prevent child maltreatment

April 3, 2018 (T)                                      Class Discussion 2                                      Ringel-Kulka/Silverstein

April 5, 2018 (TH)                                      Case Study Exercise                                      8:00-9:45

April 10, 2018 (T)                                      Mental Health and MCH                                      Cuddeback

1. To understand the complex needs of justice-involved people with serious and persistent mental illnesses; and
2. To understand policy, practice and research regarding people with serious and persistent mental illnesses at the interface of the criminal justice and mental health systems

April 12, 2018 (TH)                                      Children in Complex Emergencies                                      McClain/Jaff

1. Identify opportunities and challenges in addressing MCH in complex emergencies
2. Examine the varied roles women and children play in complex emergencies and provide information on the special needs of girls
3. Recognize the limitations of various actors in complex emergencies
4. Cite research questions related to addressing MCH in complex emergencies.

April 13, 2018 (F)                                      *Paper 3 Due*

April 17, 2018 (T)                                      Case Study Exercise                                      8:00-9:45

## **MODULE 2 (cont.) : MORE SPECIAL TOPICS**

April 19, 2018 (TH)                                      mHealth                                      Zan

1. Describe the possible applications of mobile tools to improve knowledge of, access to, and use of maternal and child health services, with special focus on family planning, in low and middle income countries
2. Review the current evidence base for use of mobile tools to address family planning, both supply- and demand-side
3. Understand potential benefits and limitations of mHealth in MCH/FP and explain key considerations for developing mobile applications

April 24, 2018 (T)                                      Case Study Exercise                                      8:00-9:45

April 26, 2018 (TH)                                      Environmental Effects on MCH                                      Leiss

1. To gain an understanding of the importance of environmental exposures for MCH
2. To gain an appreciation of the scope of the problem of children's environmental health

3. To consider the relevance of children's environmental exposures for your public health career goals
