Peer i-Coaching for Activated Self-Management Optimization
Promoting improved self-management skills is critically important for adolescent and young adult (AYA) with diabetes and other chronic diseases. Peer support interventions with AYAs are well-suited to increase activated self-management capacity and decrease overreliance on parents and health care providers. This is a mixed-methods, 5-year randomized controlled trial, that will include 225 AYAs with chronic diseases (18-26 years), to test the Peer to Peer i-Coaching for Activated Self-Management Optimization (PiCASO) versus an attention control group.

Peer Support to Enhance the Shanghai Integration Model: Extension Throughout Shanghai for Improved Diabetes Management, Patterns of Care, and Individual Well Being
The Shanghai Integration Model (SIM) has made great strides to integrating specialty/hospital care with primary/community care. This project will demonstrate/evaluate peer support to enhance the SIM and individual diabetes management in an initial phase with 9 Community Health Centers, an expansion phase with 8 communities and 4 comparison communities, and then promote dissemination across the 241 Community Health Centers of Shanghai. It is a collaboration of Peers for Progress/University of North Carolina, the Shanghai Sixth People's Hospital, Shanghai Jiao Tong University, and the Shanghai Health Bureau.
Role: Principal Investigator

Sanofi China
Peer Support for Appropriate Insulin Use in Shanghai as Part of the Shanghai Integration Model. The goal of the project was the dissemination of the interventions developed through the Shanghai Integration Model (SIM) by working with Community Health Centers (CHCs) and Community Self Management Groups (CSMGs) that are organized through district-level offices in each of the 16 districts of Shanghai
