Chair, Department of Environmental Sciences and Engineering, UNC (2016-pres.)

I serve as Chair of the Department of Environmental Sciences and Engineering, located in the Gillings School of Global Public Health at University of North Carolina – Chapel Hill. We are the first environmental engineering department located in a school of public health. The Department has provided a century of environmental solutions to public health problems and is committed to building public health resilience to climate and environmental change. We are conducting significant research on issues that disproportionately impact people of color and marginalized communities, including climate change and health, environmental transmission of COVID-19 and access to safe drinking water, locally and globally.

While Chair, ESE has developed or participated in the development of three new MPH Concentrations (Environmental Health Solutions, Health Equity, and Global Health). We joined the Assured Enrollment program which enables us to pre-admit undergraduate students to our major at the time of UNC admission, started an undergraduate minor called Engineering for Environment, Climate and Health, and we started a discovery-based undergraduate learning community called the Environmental ECUIPP Lab (Engaging Communities and Undergraduates Inquiring for Public health Protection). While some of these efforts are just beginning, we have to date seen a 14% enrollment growth and increased diversity in our student body.

Rutgers Campus Dean for Undergraduate Education (2012-2015)

I was one of 5 distinguished faculty members who together served Rutgers' 60,000 students as Campus Deans. In this capacity, I participated in the crafting of University-wide initiatives to enhance undergraduate education at Rutgers (through the Office of Undergraduate Education) and developed initiatives to strengthen the campus community. I was part of the Rutgers University Administrative Council and the Dean's Council for the School of Environmental and Biological Sciences. I was involved in: development of an honors college to attract top undergraduate scholars, university strategic planning, and integration of the University of Medicine and Dentistry into Rutgers University. I led an effort to develop strategic goals for the Campus Deans (see below) and co-chaired the writing of a white paper on Campus Deans and co-curricular undergraduate education for the central administration. On my campus, I developed collaborations and programming with faculty and student leaders. I strive to inspire students to be more active learners and to contribute more broadly to society. Here are the goals that guided my work as Campus Dean and my allocation of University resources:

Campus Dean Objectives:

- Foster a multidisciplinary, multigenerational community of scholars
- Promote a campus culture that embraces a diversity of experiences and perspectives
- Engage students in the process of discovery, so they benefit from and contribute to research mission of the University

- Develop leadership capacity and civic responsibility, producing graduates who make positive societal change
- Graduate scholars who continue to learn and teach, sharing research-based information, spreading literacy, honoring Rutgers' historic legacy, and contributing to its Land Grant mission
