NC OSHERC NORA Interdisciplinary Webinar Fall 2022 Series

Please join us as we proudly present our upcoming fully virtual webinars in Fall 2022!

Framework for Heat Stress Management

Thomas E. Bernard, PhD
Professor, College of Public Health, University of South Florida

September 16, 2022 | 11:00am to 12:00pm EST

Dr. Bernard is a professor at the University of South Florida College of Public Health. His interests in occupational heat stress span 40 years. Tom’s research and practice have focused on exposure assessment, effects of clothing and personal cooling, and physiological monitoring; and how these come together in heat stress management.

Immigration Enforcement Reduces Worker Complaints and Worsens Workplace Safety

Matthew S. Johnson, PhD
Assistant Professor of Public Policy and Economics, Sanford School of Public Policy at Duke University

November 10, 2022 | 12:00pm to 1:00pm EST

Matt Johnson is a labor economist interested in understanding how firms’ policy, institutional, and economic environment affects workers’ safety and health. He has published several academic articles in leading economics and general-interest journals on topics related to the enforcement of safety and health regulations, including the effects of OSHA inspections on workplace safety, how publicizing facilities’ OSHA violations affects compliance, and how the risk of retaliatory firing affects workers’ willingness to speak up about safety hazards. More broadly, his research seeks to understand when, and how, public policy should intervene in the labor market.
