

# Well Water Contaminants in Lincoln County

Contaminant	Drinking Water Standard	Private Well Water Test Results					
		Total wells tested	Number of wells tested above standard	Percentage (%) of wells tested above standard	Minimum	Maximum	Average
<b>Maximum Contaminant Level (MCL)</b>							
Arsenic	10	2333	85	3.64%	0.71	390	4.33
Barium	2000	1664	0	0%	70.71	400	75.38
Beryllium	4	0	-	-	-	-	-
Cadmium	5	1849	2	0.11%	0.71	40	0.74
Chromium	100	1664	7	0.42%	7.07	286	8.3
Copper	1300	1665	5	0.3%	35.36	11000	54.24
Lead	15	2325	33	1.42%	3.54	208	4.26
Mercury	2	1574	1	0.06%	0.35	2	0.36
Nitrate	10000	1276	13	1.02%	707.11	37000	1386.32
Nitrite	1000	1276	2	0.16%	70.71	1000	74.34
Selenium	50	1664	1	0.06%	3.54	55	3.62
Uranium	30	0	-	-	-	-	-
<b>NC 2L Groundwater</b>							
Barium	700	1664	0	0%	70.71	400	75.38
Boron	700	0	-	-	-	-	-
Cadmium	2	1849	6	0.32%	0.71	40	0.74
Chromium	10	1664	77	4.63%	7.07	286	8.3
Cobalt	1	0	-	-	-	-	-
Nickel	100	0	-	-	-	-	-
Zinc*	1000	1664	83	4.99%	35.36	22000	278.65
<b>Health Advisory</b>							
Iron*	2500 (DEQ)	1665	407	24.44%	70.71	64000	565.17
Manganese*	300 (EPA)	2326	404	17.37%	21.21	3000	42.45
Sodium	20000 (EPA)	1602	1594	99.5%	707.11	490000	9708.07
<b>State Health Goal</b>							
Hexavalent Chromium	0.07	3	2	66.67%	0.04	0.91	0.36
Thallium	0.2	0	-	-	-	-	-
Vanadium	0.3	0	-	-	-	-	-

Contaminant levels are measured in micrograms per liter (µg/L), which is equal to parts per billion (ppb). Note: Copper and Lead standards are called "Action Levels".

\*The EPA also has a nuisance standard for aesthetic effects caused by these contaminants, however, this table uses the health-based standard.

**Maximum Contaminant Level (MCL):** The highest level of a contaminant that the US EPA allows in drinking water supplied by public utilities. An MCL takes into consideration the best available treatment technology and associated costs along with health risk. More information about MCL standards: <https://bit.ly/epa-MCL>.

**NC 2L Groundwater:** Set by NC DEQ as the highest level of a contaminant allowed in groundwater, which may be tolerated without creating a threat to human health or which would otherwise make the groundwater unsuitable for its intended best usage, such as a drinking water. Note: Barium, Cadmium, and Chromium have different standards under state and federal regulations; both are included in this table. More information about NC 2L Groundwater standards: <https://bit.ly/nc2Lgw>.

**Health Advisory:** In the absence of federal standards, the US EPA and state agencies can issue advisories to communicate the level of a contaminant in drinking water at which harmful health and/or aesthetic effects are not anticipated to occur over a specific period of time.

**State Health Goal:** In the absence of state and federal standards, level established by NC DHHS to communicate to private well users the risk associated with using their well water.

This publication was funded by a grant from the National Institute of Environmental Health Sciences (P42ES031007).
