## **RESEARCH GRANT PARTICIPATION**

### **CURRENT**

NICHD R01HD110844 (PI: Osterman, J) 2022-2026

Role: Co-Investigator sub to UNC \$62,290

#### **Chanjo Kwa Wakati: Leveraging community health workers and a responsive digital health system to improve vaccination coverage and timeliness in Tanzania**

This study will evaluate the impact of “Chanjo Kwa Wakati” (i.e., timely vaccinations), a CHW-led outreach and educational intervention that is supported by a combination of low-cost digital strategies (autonomous mobile phone-based vaccination promotion, reminders, and stockout notifications; incentive offers for timely vaccinations) that can be scaled to low resource settings globally.

NICHD R01HD102279 2020-2025

Role: Principal Investigator \$3,085,226

#### **VITAA: Adolescent Wellness Visits to Reduce Health Risks in Tanzania**

This study tests the impact of Adolescent Wellness Visits (VITAA, Vijana Tambua Afya), a newly developed health service platform, for reaching young adolescents with HIV testing and other evidence-based prevention services which are clinic-based and school-facilitated. The intervention requires collaboration and coordination between parents, schools and clinics to serve the health and social services needs identified in the last year of primary school when school attendance is high and adolescents are on the cusp of puberty. This implementation science cluster RCT includes 20 primary schools and follows a cohort of ~1300 adolescents for three years to evaluate HIV testing uptake and health and social service utilization into adolescence. It also includes a cost-effectiveness analysis.

NIMH R01MH124476 (PI: Dow, D) 2021-2026

Role: Co-Investigator sub to UNC \$74,945

#### **SYV: A Mental Health Intervention to Improve HIV Outcomes in Tanzanian Youth**

Sauti ya Vijana (SYV, The Voice of Youth) is a mental health and life skills intervention, specifically tailored to the needs of young people living with HIV (YPLWH) in Tanzania. This clinical trial will individually randomize 600 participants into 30-40 groups of 8-10 participants per group to receive either the SYV intervention or standard of care adolescent HIV treatment across four sites in Tanzania. Our overall objective is to evaluate the effectiveness, mechanisms of change, and scaled implementation (hybrid type-1 design) of SYV. Our *central hypothesis* is that SYV will improve ART adherence and virologic suppression in YPLWH Tanzania.

NIMH 1U19MH113191 (PI: Petersen, I) 2017-2023

Role: Consultant

#### **Southern African Research Consortium for Mental Health INTegration (S-MHINT)-Research and Capacity Building Consortium to strengthen mental health integration in South Africa, Mozambique, and Tanzania.**

### **Evaluation of child-optimized financial education for caregivers on child outcomes in rural Uganda**

The goal of this cluster randomized trial is to evaluate the child-optimized financial education (COFE) curriculum which is designed to help caregivers make informed, child and HIV-sensitive financial decisions. Outcomes of interest include children's nutritional status, education, and health service use, plus caregiver financial literacy. The study population is households with HIV-affected orphans and vulnerable children in rural Uganda.
